

PLANÈTE DOREY

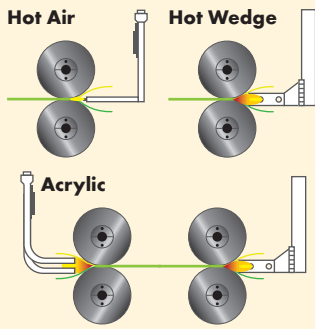

Since 60 years, we work on
sealing solutions...

Hot Air Welding
Hot Wedge Welding
Impulse Welding

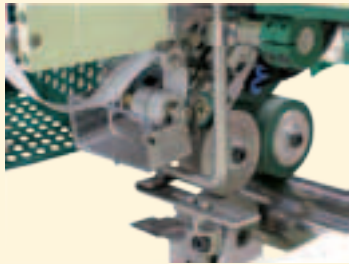

Thermoplastic fabrics, Acrylic,
Polyéthylén

T300 Extreme

T300 Extreme combines versatility and precisely controlled operating parameters with an ergonomic design and interface for easy operation, speed, accuracy and productivity.

- >> Weld rollers are independently controlled which helps produce an expanded range of products and materials
- >> Guides and accessories to weld hems, overlaps, hem with rope...
- >> Equipped with dual arms: The "Table Arm" takes care of straight seams for applications like tarps, awning and tents; while the curve arm manages curves and unique shapes for applications like boats and inflatables
- >> The T-300 utilizes both the Hot Air and Hot Wedge rotary heat sealing systems

112 Extreme

The 112 Extreme has a larger breadth of production capabilities and is easy for the operator to use.

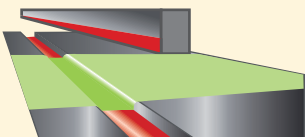

With precision-controlled welding parameters, easy recall settings and an ergonomic design, the 112 Extreme™ is built to take production and efficiency to the next level.

- >> The 112 Extreme can be built to various lengths to fit any company size, application or printer specification
- >> Guides and accessories to weld hems, overlaps, hem with rope, backlite, webbing...
- >> Alignment lasers, dual fabric clamps and dual vacuum chambers

Impulse

IMPULSE Extreme

The Impulse Extreme is ergonomically designed for easy use and operation to improve efficiency.

The Impulse Extreme incorporates an effective thermo impulse sealing technology with precision controlled welding parameters that will create the best looking and strongest seams, on PVC or Acrylic fabrics.

M100

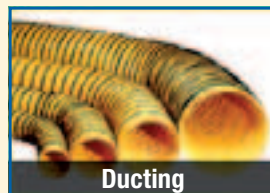

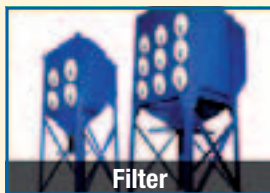

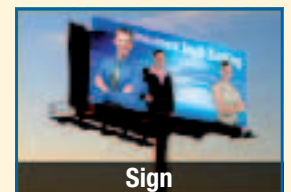

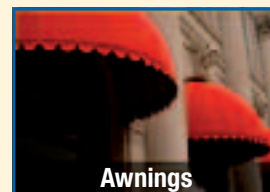

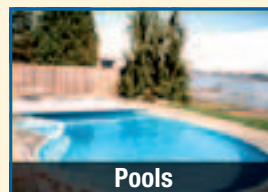

The M-100 Multi-Seal System built to the customer's specifications and dimensions is an exceptionally efficient system for joining straight seamed, multi-width panels.

This system will pull fabric directly off roll and produce multiple, continuous seams to any desired length and width. The number of seams is determined by the number of laterally adjustable welding heads. The welding heads can be easily positioned for different product specifications and panel widths.

The M-100 Multi-Seal System can be used as a complete fabrication center. Unwind stand assemblies, powered rewinding equipment, fabric accumulators, programmable footage counters, and automatic cut-to-length systems are also offered.

Manufacturer for Thermoplastic and more fabrics heat sealing solutions
